Did You Know?

Emergency contraception (EC) is a concentrated dose of the same hormones found in safe and legal birth control pills.

1.7 million unintended pregnancies and 800,000 abortions a year could be prevented through increased access to and use of emergency contraception.

FDA's 2006 decision to make emergency contraception available without a prescription for women over 18 still disadvantages young women and requires for EC to be kept behind the pharmacy counter hiding it from women.

**Emergency contraception needs
to be truly accessible in our
community!**
